

Barnsley Civic Centre, UK  
Glass Wagener supplied low-E glass and  
400 sqm Vacurex panels (U-value 0,31 W/m²K)

## VACUREX Intelligent spandrel panels

Vacurex spandrel panels are based on innovative vacuum technology and differs from conventional insulation products through unbeatable combination of aesthetic qualities and thermal efficiency.

The insulation material is inserted between two ceramic enamelled glass panels or coated aluminium sheets and achieves **U-values from 0,36 W/m²K** at only 24mm total thickness **down to 0,17 W/m²K** at 40mm total thickness.

Vacurex panels are slim, low-weight and high-efficient. The visual appearance is attractive and durable from both inside and outside views.

The panels are available in various RAL colours or in combination with Decolite spandrel glass which helps to match perfectly the appearance of solar control coatings used in vision areas of the facade.

Vacurex panels are available also as triple glazed units or in combination with Schüco spacer bar or other toggle channels for Structural glazing systems.
