

## AcheruntiaGlass, ITALY

Founded in 2000, AcheruntiaGlass is a leading manufacturer of acid etched glass in different sizes, colours and thicknesses.

Our product range:

**ROYAL SAT:** This satin glass is the result of technological innovations applied to the traditional processing techniques of acid etching glass. Prestigious, elegant, stain resistant, it's destined to the more particular processing.

**OPAL PLATED:** Translucent, uniform, with a low level of porosity that guarantees an optimal easiness in cleaning, simplifying all other further processing: bending, laminating, tempering and incision.

**MIRROR SAT:** The acid etching processing of the Royal Sat range and the Opal Plated range can be applied to the sheets of mirror. The result, elegant and velvety, is highly resistant to fingerprints.

**ROYAL LAC:** Royal Lac is float glass painted on one side and acid etched on the other. Royal Lac has a high quality finish both on the painted side and on the satin side, and it's perfect for furniture, wardrobe doors and wall covering.

**SAFECOLOR:** Safecolor is a laminated glass with a coloured PVB, and acid etched on one side. The beauty of Safecolor is in the combination of the colour of a painted glass with the light transmittance of satin glass.

AcheruntiaGlass is constantly committed in the research of new technological improvements in order to improve the quality of its products and to preserve our environment.
